Who is actually coming? secureIT for schools

Info sheet for the school office, school management and parents · version as of 09.10.2026

The person

My name is Patrick Ihle. I founded secureIT in 2023 in the Breisgau region and run it on my own: I develop the courses, operate the platform, stand in front of the class and answer the phone. For schools this is an advantage, because you always know who is coming.

- **Education:** Dipl.-Ing. (German engineering degree) in information technology, network and software engineering (BA).
- **Profession:** working full-time in IT security for many years, regularly for public authorities, law enforcement and medical laboratories.
- **Teaching:** external lecturer at DHBW Lörrach (Baden-Württemberg Cooperative State University); courses at schools and at the Volkshochschule (adult education centre); trainer for students and apprentices for more than 20 years.
- **Company:** secureIT UG (haftungsbeschränkt), Amtsgericht Freiburg HRB 730297, managing director Patrick Marc Ihle.

What schools are offered

Everything is prepared so that teachers can run it without me. On request, I come by in person.

- **Three teaching units** for grades 5 to 10 ("Starting out safely online" 5/6, "Media literacy" 7 to 9, "Digital self-defence" 8 to 10), each lesson mapped to the Baden-Württemberg curriculum (Bildungsplan). The teacher projects, the class joins in on their phones via QR code: quizzes, word clouds, learning games. No pupil account, no app, no registration.
- **Phishing training at the end**, only in the course "Digital self-defence" and only with parental consent: three simulated fraud attempts by email, with a certificate for successful participation. Pupils who do not take part still join in the lessons.
- **Training for the teaching staff** with a phishing course, practical test and training certificate, after involving the staff council (Personalrat).
- **Parents' evening** with a letter to parents as a template, on request with me as the speaker.
- **On site by arrangement:** "Cybersecurity: discover the world of hackers" with live examples, "Digital security in the workplace", and for teaching staff and parents: AI at school, phishing at schools, awareness at schools.

Why this costs nothing. secureIT offers businesses awareness training and phishing simulations; that is my actual business, and this company training finances the schools programme. Schools, teachers, parents and pupils never pay anything, not even for a visit on site. There is no licence, no contract term, no advertising in lessons and no intention to sell to schools.

Data protection in one sentence

A first name is all that is needed to take part; only those who take part in the phishing training with parental consent provide an email address. Servers in Germany, no disclosure to third parties, no tracking, data processing agreement available. In detail for the data protection officer: secureit.icu/schulen/datenschutz
